## About the products

**TEKSas Target Practice™** steps students through 36 weeks of practice, arranged into color-coded, 10-day cycles. This organization makes exercises visually clear for students while keeping teacher effort minimal. Each cycle covers all of the math TEKS for your class to prepare them for the STAAR® exam in just 10 minutes a day. TEKSas Target Practice™ can be used in conjunction with any math curriculum. Schools all over Texas have seen scores soar after faithfully implementing the program.

**Target the Question™** is correlated to the Texas Essential Skills and Knowledge (TEKS) as well as the Common Core, so it's compatible with any curriculum. It is also a rigorous program, focusing on critical thinking, application of problem-solving strategies, and selective use of information from passages and questions, so students will be prepared for any major exam, including the STAAR® test. Best of all, all of these skills are covered in just minutes each day!

**Target Reading™** is a yearlong, high-interest, teacher-friendly, student-involving tool that teaches reading and language skills as well as elaboration in writing. In just 10 to 15 minutes a day, the program provides scaffolding for improvement in reading fluency, vocabulary development, writing elaboration, sentence construction and usage, handwriting, and the development of critical thinking skills.
